To Whom It May Concern:

Pursuant to the Ohio Open Records Law, §149.43 et seq., I hereby request:

- a **spreadsheet, table or other document** listing the most current list of providers enrolled to provide COVID-19 vaccines in Ohio **including provider name, id, date enrolled, location, and all non patient-identifying fields.**

...

I request these records be provided in an **electronic format that can be imported into standard database software.** Examples of such formats include an Excel .xls or .xlsx file, an Access .mdb or .accdb file, a text-based delimited file such as .csv or tab-delimited .txt, a .dbf file or an SQL dump readable by standard open-source database software. **(A PDF file would not comply with this request because PDF files are not readable by database software.)**

Hi Aleszu,

Thanks for reaching out and I'm happy to speak. But before we do, can you clarify the exact dates that your graph below shows? It seems like you're saying August 2020 – April 2021, is that right?

If that is the case, I think it's pretty important to include the Delta era in a graph like this, which I see you did in the linked USA Today piece.

Do you have a version that includes up to October 2021?

Thanks

Hi Dr. Connor,

I came across your name on a study on RSV in middle-aged and older adults – and I wondered if you might be able to help me locate pediatric (17 and under) hospitalization rates (per 100,000 children) for RSV by U.S. state for the past few seasons?

I'm trying to compare those against Covid and influenza rates, which I've already found at [HHS](#) and CDC's [FluServe-NET](#).

I'm basically trying to fill out the following chart, but with RSV data. The chart shows hospitalization rates per 100,000 children for Covid vs. two flu seasons. I'd like to add an RSV line that would be most appropriate.

Here's an interactive map of all pipeline spills since 2010. @undarkmag #noDAPL #standingrock undark.org/article/oil-pi

10:43 AM - 26 Jan 2017

COVID-19 in kids: Methodology

Weekly pediatric admissions were calculated by totaling each week's previous day pediatric admissions confirmed positive for COVID-19 reported by hospitals to HHS. Rates were calculated by dividing total weekly admissions by child population sourced from the 2019 American Community Survey. Cases and deaths per 100,000 by age group were sourced directly from the CDC. The child vaccination rate was calculated by subtracting the number of people age 18 or older fully vaccinated from the number of people age 12 or older fully vaccinated, then dividing by the child population.

Over 70,000 [miles of crude oil pipelines](#) — most of them underground — spread like vasculature beneath the earthen skin of the United States. Those conduits, **sometimes wide enough for a person to shimmy through**, transport around [one billion](#) gallons of oil every day from production fields to refineries, and they help to satisfy the nation's oil habit, which [amounts](#) to about 19.4 million barrels (or 814 million gallons) of oil consumed every day, on average. But with that much oil and that much pipe — **enough to circle the globe nearly three times** — accidents are inevitable. In fact, since 2010, there have been more than 1,300 crude oil spills in the United States, according to [data](#) collected by the Pipeline and Hazardous Materials Safety Administration, a regulatory arm of the U.S. Department of Transportation.

That's one crude oil spill every other day.

Introduction

USING R FOR DATA
JOURNALISM

This course is designed to give you a sense of all the possibilities from programming in R.

<https://learn.r-journalism.com/en/introduction/>

The screenshot shows a Python notebook interface. On the left is a table of contents with 'Chapter 5: Hello data' selected. The main area shows a code cell with the following text:

```
committee_list = pd.read_csv("https://first-python-notebook.readthedocs.io/_static/committees.csv")
```

Below the code cell, there is explanatory text about creating a variable and using methods.

<https://www.firstpythonnotebook.org>
