

Machine Learning and Rare Disease Research: *a boost for innovation*

Jineta Banerjee

Principal Scientist, Sage Bionetworks

In the talk today:

- Where we are today and where we would like to go

- Machine learning and AI in rare disease today
 - Definitions
 - Challenges and Promises
 - Patients and therapies
 - Caregivers

- Looking to the future
 - Challenges and Promises:
 - Multi-modal data from patients
 - Digital twin technology
 - Foundation models in medicine

NEWS | 06 October 2023 | Correction 06 October 2023 | Correction 09 October 2023

Gene therapies for rare diseases are under threat. Scientists hope to save them

As industry steps aside, scientists seek innovative ways to make sure expensive treatments can reach people who need them.

What do we want the headlines to be?

Early diagnosis of rare disease X now possible

New and improved treatment now available for
rare disease Y

FDA approves the first drug that targets rare
disease Z

But we are not there yet!

What do we need to get there?

Molecular, Pharmaceutical, and Clinical
Research

What do we need to get there?

Molecular, Pharmaceutical, and Clinical
Research

Accelerate biomedical discovery using
computational methods

What do we need to get there?

Traditional Machine Learning (ML)
and
Artificial Intelligence (AI)

How can AI or ML help people living with rare diseases?

Traditional machine learning (ML) in rare disease

- Biomarkers
- Improved therapeutic targets

Definitions

TRADITIONAL ML TASK:

- Identifying a disease sample based on patterns in given data

FEATURES:

- individual measurable property or characteristic of a phenomenon

SAMPLES:

- Individual data points

CLASS / LABEL:

- Disease type

TRAINING DATA:

- Data to train the model to identify disease sample

TESTING DATA:

- Data previously unseen by the model

ML in rare disease faces many challenges

- Data
- Method

Data challenges for ML in rare disease

Machine learning needs large datasets

- Biomedical data contain many features
- To detect patterns effectively, algorithms need access to many samples
- “Curse of dimensionality”

Rare disease, by definition, has few patients or samples

Collection of rare disease datasets

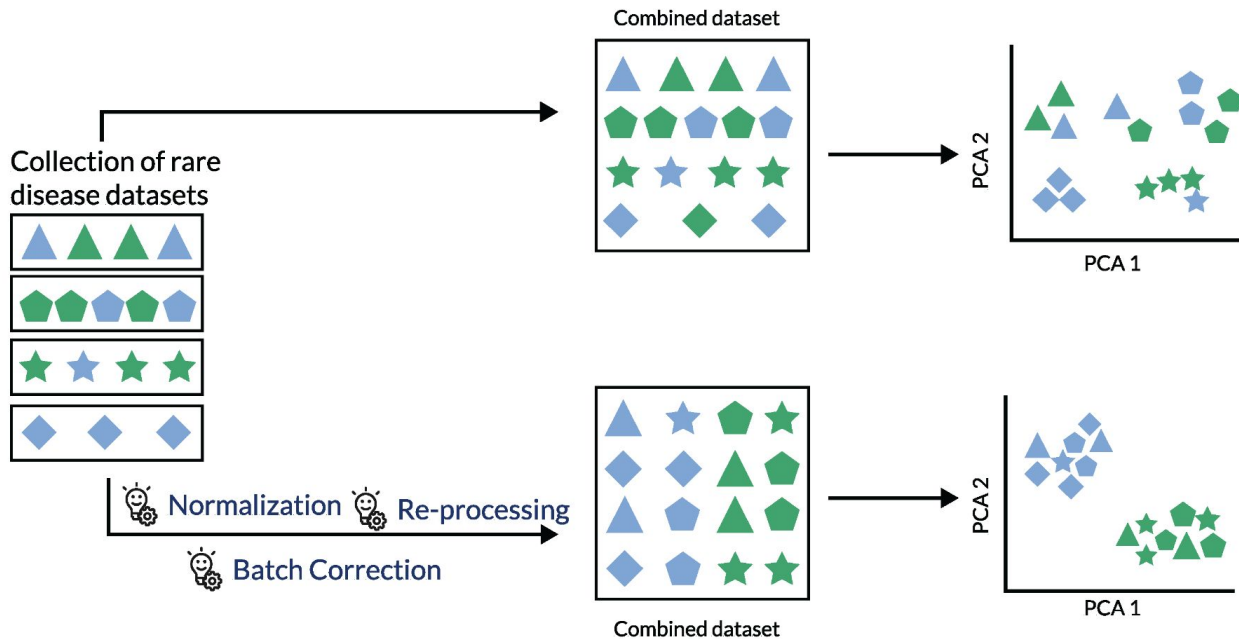

Legend: Color = disease, Shape = dataset origin

Combine multiple datasets to make one big dataset

*Legend: Color = disease, Shape = dataset origin
Banerjee et al, Nature Methods, 2023*

Combine multiple datasets to make one big dataset

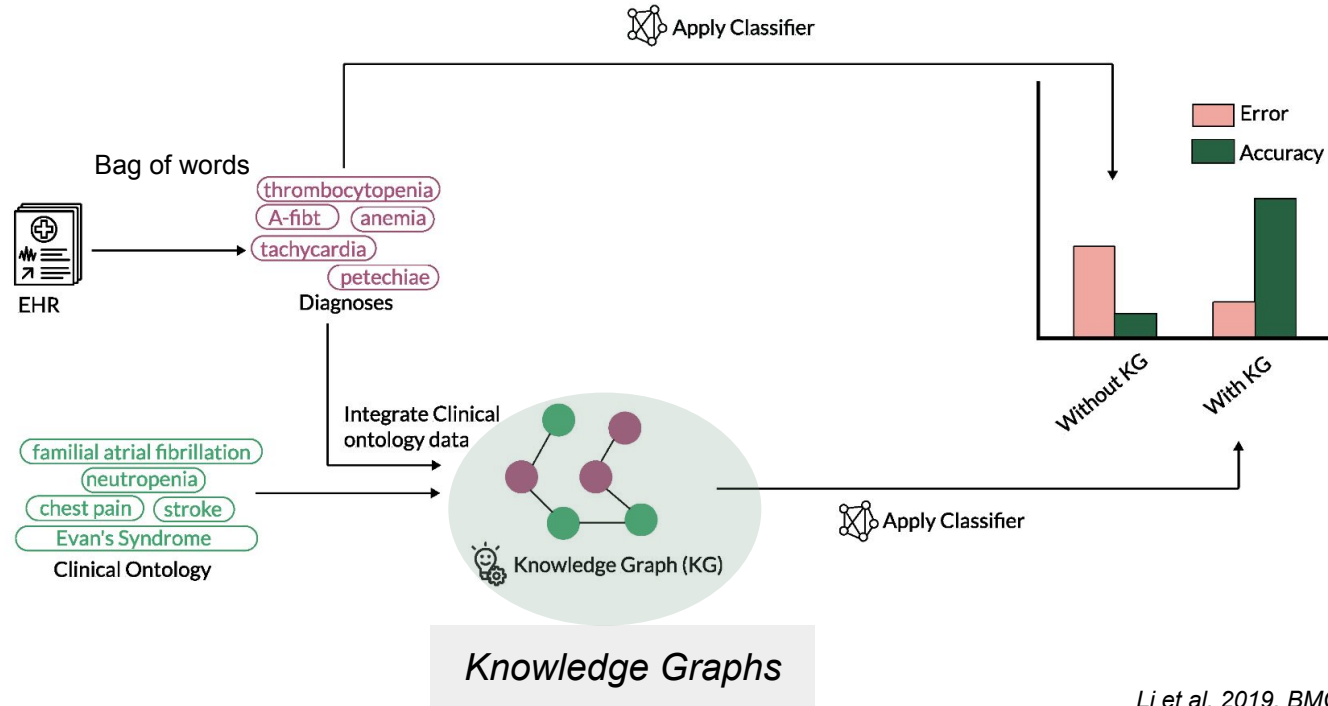

Legend: Color = disease, Shape = dataset origin
Banerjee et al, Nature Methods, 2023

Augment a dataset using prior knowledge

Augment a dataset using prior knowledge

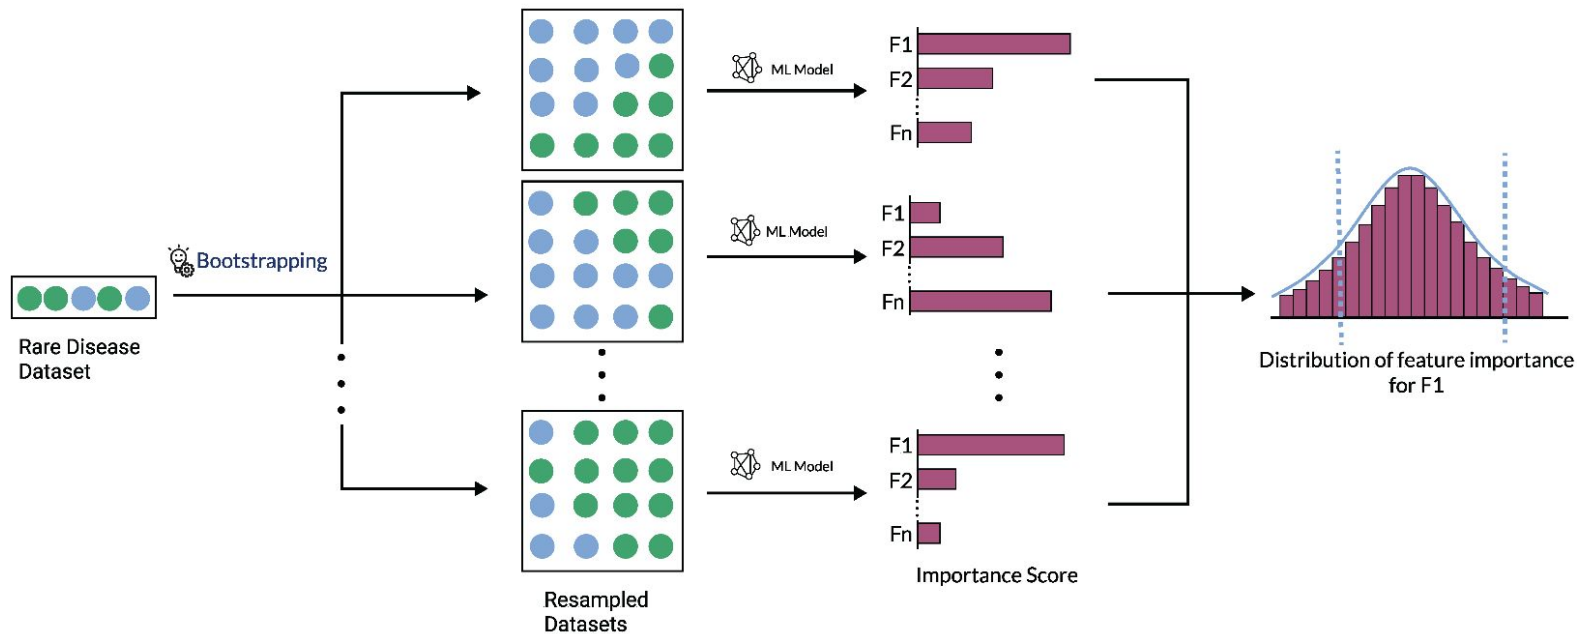

Methodological challenges for ML in rare disease

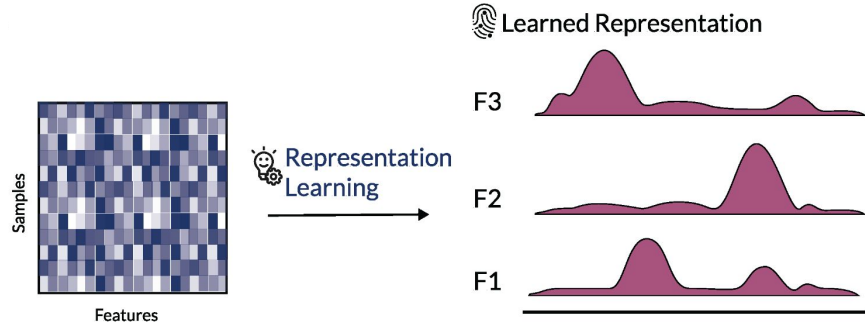

Artificially increase the exposure of the model to rare samples

Resampling with replacement

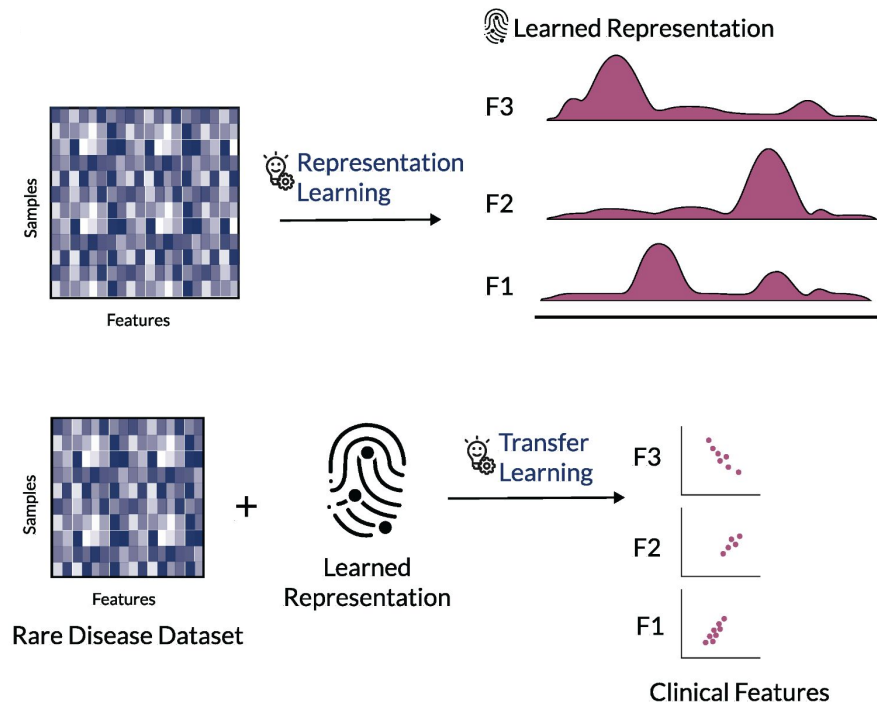

Learn from a larger dataset, then transfer to a small dataset

Transfer Learning

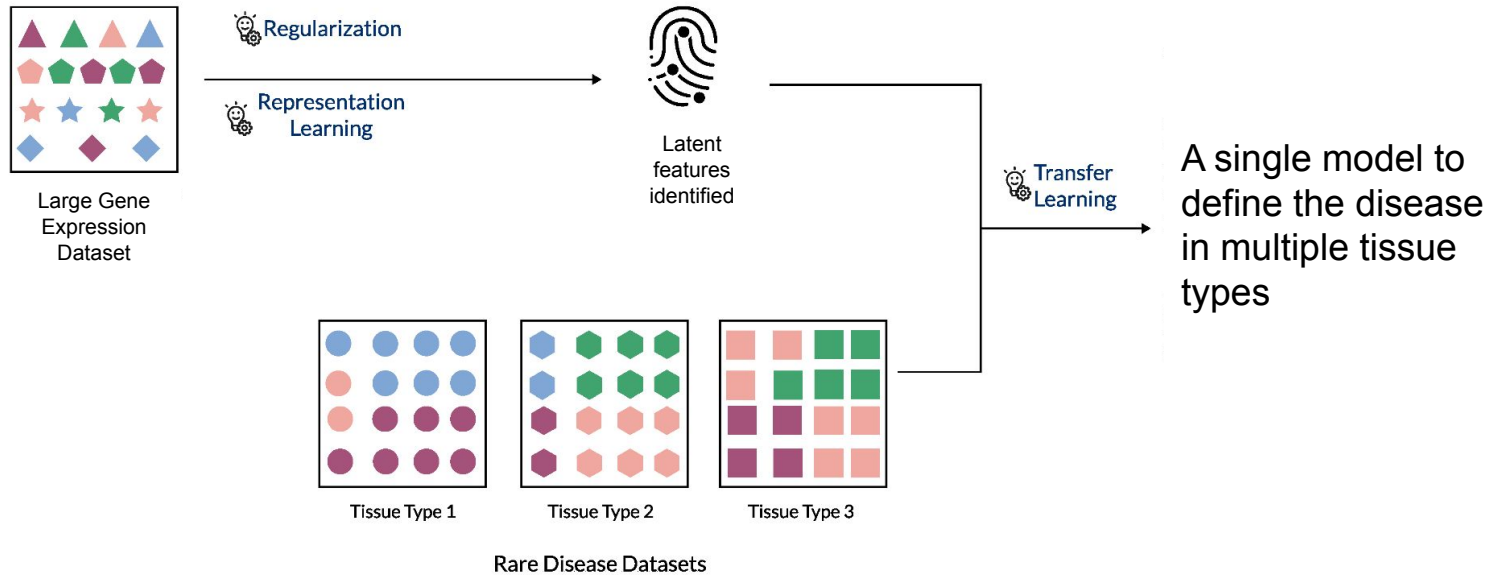

Learn from a larger dataset, then transfer to a small dataset

Transfer Learning

Combine multiple approaches

Main takeaways:

Careful inspection of biomedical articles applying AI/ML models to rare disease :

- Were the datasets constructed appropriately?
- Were multiple approaches taken to build appropriate models for the task at hand?
- Were the methods statistically rigorous?

How can you help

Help us get the word out :

- Need well-described data that were generated with ML applications in mind

Making rare disease datasets openly available

How can you help

Help us get the word out :

- Need well-described data that were generated with ML applications in mind
- Need for development of methods that are tolerant of small sample sizes

Even bigger implication

Rare

Even bigger implication

Rare

One among many

How can AI or ML help caregivers ?

- Caregivers turned patient-advocates
- Primary care physicians who may not be disease experts

Enhance accessibility to rare disease research

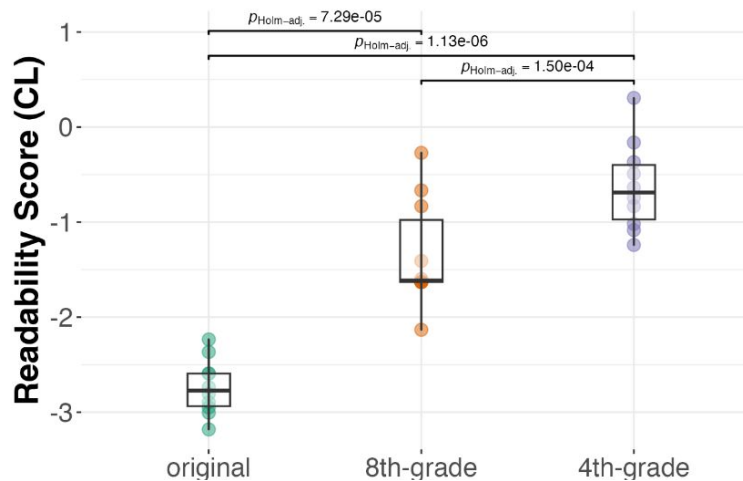

- Patients and caregivers generally have to advocate for themselves
- Need to keep up with research in their disease
- Patients and caregivers are not used to scientific jargon

Enhance accessibility to rare disease research

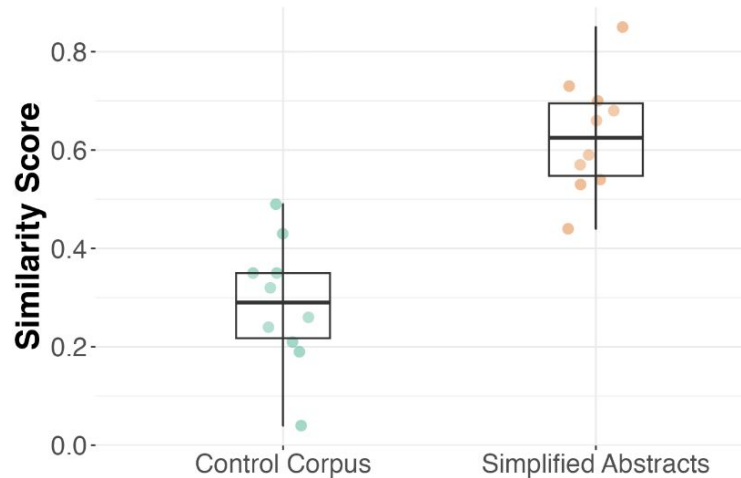

Large Language Models can help simplify research

Enhance accessibility to rare disease research

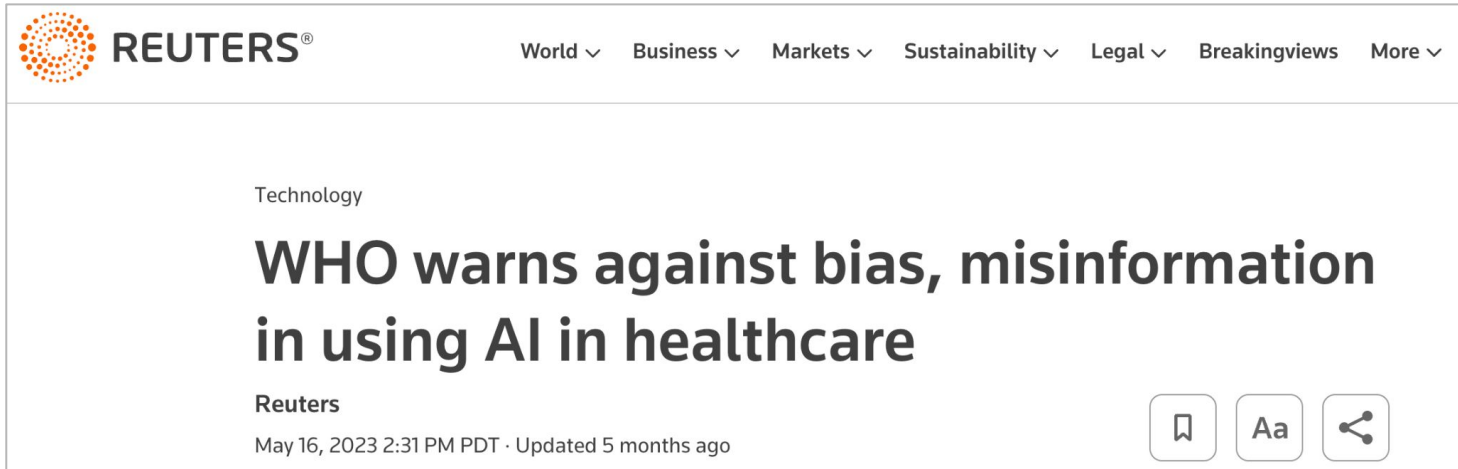

Large Language Models can help simplify research but preserve meaning

How can you help

- Vigilance towards incorrect information from LLMs

The image shows a screenshot of a Reuters news article. At the top left is the Reuters logo, a circular pattern of orange dots. To its right is the word "REUTERS" in a bold, sans-serif font. Further right is a navigation menu with the following items: "World", "Business", "Markets", "Sustainability", "Legal", "Breakingviews", and "More", each followed by a small downward-pointing chevron. Below the navigation menu is a horizontal line. Underneath this line, the word "Technology" is centered. The main headline is "WHO warns against bias, misinformation in using AI in healthcare" in a large, bold, black font. Below the headline, the word "Reuters" is written in a smaller font. At the bottom left of the article preview, the text "May 16, 2023 2:31 PM PDT · Updated 5 months ago" is displayed. On the right side of the article preview, there are three icons in rounded square buttons: a bookmark icon, a font size icon labeled "Aa", and a share icon.

Looking to the future:

Multimodal data from patients

- Improved capabilities of generating rich datasets from rare disease patients

➤ Promises:

- Provide complete picture of disease

Looking to the future :

Digital twins in rare disease

- Digital twin technology
 - Digital twins help test technical advancements before release to general public

What is digital-twin technology?

July 12, 2023 | Article

Looking to the future :

Digital twins in rare disease

➤ Promises:

- Disease modeling using multi-modal data
- Protection due to advances in differential privacy and privacy preserving record linkage
- Help in optimizing clinical trial design and pre-clinical research

➤ Challenges to overcome :

- Privacy
- Ethical implementation
- Reliability

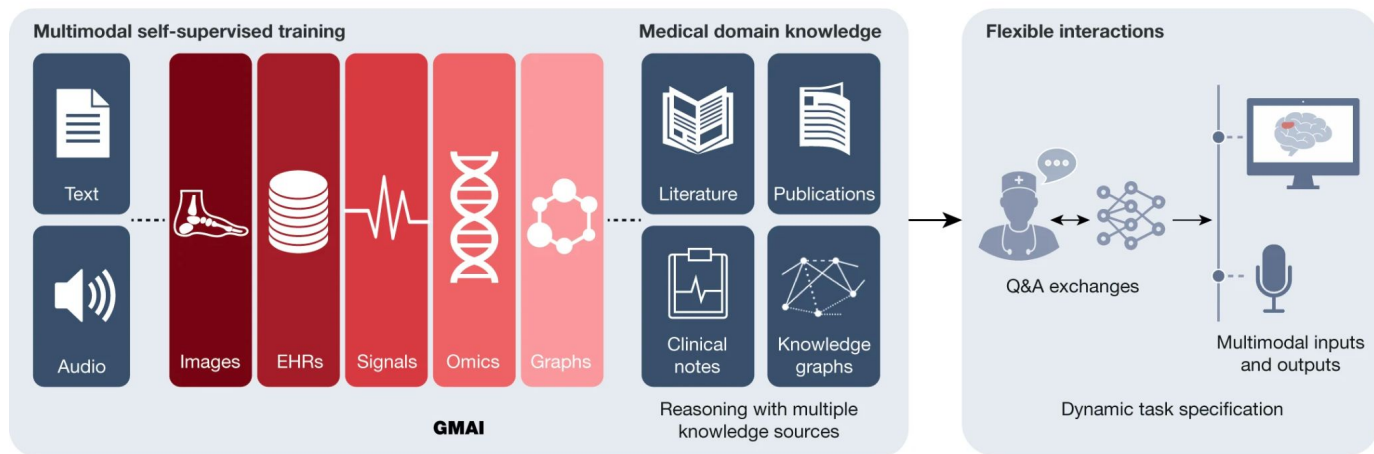

*Acosta et al, Nature Medicine, 2022
Images courtesy: DALL-E3*

Looking to the future :

Foundation Models in Medicine

- Promises:
- Flexible interactions
 - Adaptability

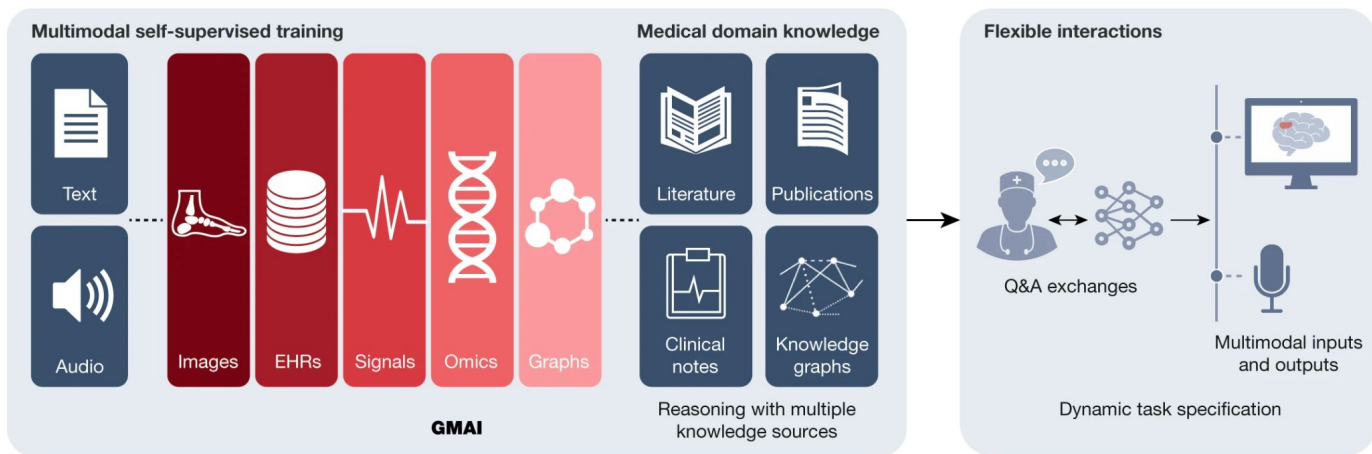

Looking to the future :

Foundation Models in Medicine

➤ Challenges to overcome:

- Reliability
- Biases
- Privacy preservation

How can you help

Help us get the word out :

- Promote generation of well-described data from underrepresented populations to train the next generation of models
- Promote vigilance towards protection of privacy in these sophisticated AI applications
- Promote fact-checking of AI applications to ensure reliability of the models

Thank You
